- Minimum depth.
- High security lock.
- Rear cable output.
- Membrane keyboard for service activation with 2 or 6 selection keys. 7 segment 4 figure display.
- Internal on and off switch.
- The boards and electromechanical components have been mounted on a rotating support for easy maintenance.

FUNCTIONALITY

With the possibility of choosing between the four different versions, MultiService can make external services automatic using a single payment system.

With the RM5-T electronic coin mechanism

- It can manage up to two different types of services.
- The service can be activated automatically or by choosing a selection key, which also stops or restarts the service.
- Coin or token settings and main configuration parameters can be set on site, directly on the coin mechanism.
- It is possible to activate a warning signal for the end of the service, where the time can be programmed on site.
- If necessary, it is possible to connect external pushbuttons, with the same numbers and functions as the internal ones.

With the EuroKey Plus key system and RM5-F00 electronic coin mechanism

- It can manage from two to six different types of services.
- It gives the possibility of using all the advantages that the EuroKey Plus key system offers: customer fidelity, elimination of cash circulation, a single payment system for different machines
- It is available in the version with only the EuroKey Plus key system.

TOOLS

- **Programmer:** the portable instrument used to do programming and configuration operations on site. It is equipped with specific software which can be used both for the RM5-F00 and the EuroKey Plus.
- **Audit box:** to withdraw and record auditing data from up to 80 different machines. Readings can be made by simply connecting to a PC, via USB.
- **Coin settings and/or updating firmware files** can be downloaded free from the Comestero's website in the download area.
